## Clinical and basic immunodermatology

Edited by Gaspari, Anthony; Tying, Stephen K. SPRINGER. 2009; XVIII, 812 p. 162 illus., 139 in color. Softcover. ISBN 978-1-84882-851-3

There has been an explosion of information in the fields of cellular, molecular, innate, adaptive immunity, and immunopharmacology. These advances have been applied and translated to a better understanding and treatment of a number of dermatologic diseases. In parallel, new therapeutic agents are under constant development that are targeted therapies or have an immune mechanism.

Clinical and Basic Immunodermatology includes contributions from experts from across the globe. The editors' main goal has been to present the latest information related to fundamentals of the skin immune system. A second goal has been to create a concise, readable, and easily digested disease-focused textbook that is designed for residents and fellows in dermatology and immunology.
