SUPPLEMENTARY MATERIAL

SUPPLEMENTARY TABLE 1:

Reference	Study type	Populatio n/ Country	Objective	Sample Size	Source	Genes	SNP/Mutation	Results/conclusion
Adappa et al. 2016 [109]	CG	USA	To determine whether TAS2R38 genetics predicts outcomes in CRS patients following sinus surgery	82 CRSwNP 41 CRSsNP	NP, sinona sal tissue	TAS2R38	rs713598 (G/C; Ala/Pro)) rs1726866 (G/A; Val-Ala) rs10246939 (T/C; Ile-Val)	The genotype PAV/PAV was related to lower incidence of failing therapy and less frequent sinus surgeries
Ahmed et al. 2017 [33]	CG	Iraq	To clarify the role of <i>IL4</i> polymorphism in NP	22 healthy controls (HC) 36 NP	NP, inferio r turbin ate mucos a (ITM)	IL4	?	The polymorphism was found in NP patients but not in controls
Akygit et al. 2017 [53]	CG	Turkey	To identify genetic polymorphism of SOD2, CAT, iNOS enzymes in E- CRSwNP and NE-	188 HC 65 E-CRSwNP	Blood	NOS2 SOD2	-277A/G 16C/T	The GG genotype (NOS2) and TT genotype (CAT) distributions were different between E-CRSwNP and controls
Alromaih et al. 2013 [27]	pGWA S	Canada	CRSwNP patients. To identify whether genetic factors associated with MHC1 deficiency are present in CRS	65 NE-CRSWNP 196 HC 154 CRSWNP 52 CRSsNP	Blood	CAT CD8A TAPBP	-21A/T rs3810831 rs2282851	The minor allele C in <i>CD8A</i> (OR 0.706; p=0.047) and heterozygous CT (OR 0.370; p=0.012) had a protective effect on the development of CRS. The minor allele T in <i>TAPBP</i> (OR 1.53; p=0.009) and heterozygous TT (OR 2.67; p=0.042) were associated with an increased risk for CRS.
Al-Shemari et al. 2008 [56]	CG	Canada	To evaluate the effects of SNPs on CRS in a panel of genes related to cysteinyl leukotriene metabolism	200 HC 179 CRSwNP 27 CRSsNP	Blood	ALOX5 AP ALOX5 CYSLTR2 CYSLTR1 LTC45	rs12430915 rs9506352 rs4769870 rs9579648 rs4076128 rs9579649 rs4076128 rs9579649 rs1616333 rs9315051 rs4769055 rs4420371 rs578196 rs4420371 rs9578196 rs4420371 rs9578196 rs4420371 rs9578196 rs4420371 rs1226029 rs9285076 r510162089 rs9670198 rs4254165 rs4319601 rs4356336 rs4769063 rs17612127 rs42848139 rs378094 rs3780901 rs227943 rs7999684 rs1555096 rs148756 rs7919239 rs2291427 rs739365 rs7115819 rs370901 rs227943 rs11239523 rs370906 rs321090 rs321006 rs321006 rs321006 rs730012 rs2291418 rs166624 s166624	2 6
Bae et al. 2013 [110]	CG	Korea	To investigate the association between <i>CIITA</i> and NP	All asthma patients: 158 CRSwNP 309 CRSsNP	Blood	CIITA	rs12932187 rs4781019 rs649812 rs4781011 rs11074938 rs11074934 rs11074939 rs8043545 rs7404786 rs720143 rs8063850 rs6498119 rs4781024 rs113956 rs7189406 rs4774 rs6498124 rs4781016	and 2 haplotypes (CIITA_BL1_ht2 and CIITA_BL1_ht5) were demonstrated to be associated with nasal polyps (P=0.001-0.01, OR=0.53-2.35 depending 0 on the genetic model). After multiple testing correction only rs12932187

Baldan et al. 2015 [111]		CG	Italy	To investigate the effect of 3 <i>IFRD1</i> SPNs on the development of NP in CF patients	CF patients: 40 with NP 103 without NP	Blood	IFRD1	rs6968084 (C>T) rs3807213 (A>C) rs7817 (C>T)	rs7817-CT showed 4-fold higher probability of NP than CC; the TT showed 7.3-fold increased probability. The CAT haplotype showed higher probability of NP (OR 2.63, p=0.004) compared to the CCC haplotype.
Batikhan et al. 2010 [47]		CG	Turkey	To investigate the possible association of <i>TNF</i> -308G/A with NP	95 HC 97 NP patients	Blood	TNF	rs1800629	The presence of the <i>TNF</i> -308 G/A SNP was an independent risk factor for development of NP (OR, 3.68; CI,
									1.27–10.7; p = 0.016)
Benito- Pescador et		CG	Spain	To analyze	245 HC	Blood	LTC4S	rs730012 (-444A>C)	The –444A>C LTC4S polymorphism was
al. 2012 [57]				polymorphisms in LTC4S, CYSLTR1, PTGDR, and NOS2 as	241 NP:		CYSLTR1	927 T>C	significantly associated with NP and atopy (P=.033) and with NP and atopic asthma,
				representative genes of inflammation pathways in a population of patients with NP	145 asthma 81 NSAID		PTGDR	-613 C>T -549 T>C	(P=.012). A significant association was found when the (CCTTT) repetition of the NOS2A gene was present more than 14 times
					75 aspirin triad			-441 C>T -197 T>C	in patients with NP and asthma (P=.034), in patients with polyposis and intolerance
							NOS2	ССТТТ	to nonsteroidal anti-inflammatory drugs (P=.009), and in patients with the aspirin triad (P=.005). The <i>PTGDR</i> diplotype CCCT/CCCC (-613CC, -549CC, -441CC and
									-197TC) was more frequent in patients with NP (P=.043), NP with asthma (P=.013), and the aspirin triad (P=.041)
Berghea et al. 2014 [51]		CG	Romania	To investigate the association between	45 NP (38 NSAID+ 7 ATA)	Blood	TNF	rs1799724 (-857 C>T)	There was an association of -857C>T with NP (p=0.01 ATA; p=0.05 NSAID). The
				TNF SNP with NP in Romanian patients with	61 without NP			rs1800629 (-308 G>A)	allele T was more frequent in NP patients than in non-NP patients.
				asthma	(8 NSAID+ 53 ATA)		X	rs361525 (-238 G>A)	
Bernstein et al. 2009 [30]		CG	USA	To investigate the role of 7 proinflammatory, 4	153 HC	Buccal	TNF	rs1800629	The frequency of the A allele in <i>TNF</i> is significantly higher in patients with NP
				anti-inflammatory, one Toll receptor and 2	179 NP	cells	IL1A	rs3783521	versus controls (OR 1.86; 95% CI, 1.4– 3.09)
				chemokine polymorphism in				rs17561	
				patients with massive NP			IL1B	rs3087258

				risk of CRSwNP in Poland				-33C/G	were associated with an increased risk of CRSwNP.

Reference	Objective	Tissue	Epigenetic assay	Population	Significant findings
Callejas-Diaz et al. 2020 [84]	To identify which key mRNA and miRs are regulating in vitro mucociliary differentiation of human adult basal stem cells under pathological and healthy conditions.	NP, inferior turbinate mucosa (ITM; control)	miRNA	Spain	Transcriptome related to ciliogenesis and cilia function is significantly impaired during differentiation of CRSwNP epithelium due to an altered expression of microRNAs, particularly of those belonging to mir-34 and mi- 449 families
Cheong et al. 2011 [76]	To analyze the genome-wide DNA methylation levels in nasal polyps from patients with AIA.	NP, buffy coats	Genome-wide DNA methylation	China	 332 loci in 296 genes were hypermethylated in AIA vs ATA. These genes are involved in ectoderm development, hemostasis, and wound healing. 158 loci in 141 genes were hypomethylated in AIA vs ATA. Relevant pathways were lymphocyte proliferation, cell proliferation, leukocyte activation, and immune response.
Cho et al. 2012 [75]	To study the effect of trichostatin A (TSA), a histone deacetylase inhibitor, on TGFβ1-induced myofibroblast differentiation and ECM accumulation in NP fibroblasts.	NP, ITM	Histone acetylation control	Korea	The expression levels of HDAC2, α -SMA and TGF- β 1 were increased in NP compared to normal tissues. TSA induced hyperacetylation of histones, inhibiting them. HDAC inhibition is associated with myofibroblast differentiation and ECM accumulation in NP.
Cho et al. 2013 [75]	To investigate the inhibitory effect of TSA on myofibroblast differentiation and ECM production in nasal polyp organ cultures.	NP tissue cultures	Histone acetylation control	Korea	TSA inhibited HDAC and induced hyperacetylation of histones H4
Kidoguchi et al. 2018 [77]	To investigate the methylation levels at 3 CpG sites in the proximal PLAT promoter and their effects on gene expression in NP tissue.	NP, ITM	DNA methylation	Japan	Methylation of -618, -121, and -105 CpGs was significantly higher in NP. <i>PLAT</i> expression was lower (p>0.001). The methylation changes at -618 site showed a negative correlation with the gene expression changes between NP and ITM (r=65, p<0.01).
Kim et al. 2018 [78]	To elucidate whether DNA methylation of specific genes is involved in the development of NP.	NP,	DNA methylation	Korea	The promotor regions of 10 and 30 genes were hypermethylated and hypomethylated, respectively, in NP samples compared with controls. The top four genes with altered hypomethylation in NP tissues were <i>KRT19, NR2F2, ADAMTS1</i> and <i>ZNF222</i> .
Kim et al. 2019 [79]	To investigate the expression and distribution of FZD5 and the role of eosinophil infiltration in CRSwNP pathogenesis.	NP, uncinated process tissue	Methylation profiling	Korea	397 and 387 genes were differentially hypermethylated and 399 and 208 genes were hypomethylated in the E- CRSwNP and NE-CRSwNP groups, respectively, compared to the control tissues. Most of the differentially methylated genes were associated with cancer pathways. FZD5 was significantly hypomethylated in the E- CRSwNP compared to the NE-CRSwNP group.
Li et al. 2019a [80]	To determine whether there was any association between abnormal DNA methylation of TSLP gene and CRS	NP, ethmoid mucosa (CRSsNP) patients	DNA methylation	China	There was an increase in methylation ratios of 4 CpGs (2, 22, 23, 24) of TSLP gene had increased in the CRSwNP patients compared to the CRSsNP and

	pathogenesis.	and ITM			control subjects, significantly related to disease status (p<0.02)
Li et al. 2019b [81]	To determine whether there was any association between abnormal DNA methylation of IL8 promoter and CRS pathogenesis.	NP, ethmoid mucosa (CRSsNP) patients and ITM	DNA methylation	China	Three CpGs (-116, -106, -31) were significantly hypomethylated in the CRSwNP group compared with CRSsNP and HC.
Liu et al. 2018 [85]	To study the role of miR124 in CRSwNP.	NP, ITM	miRNA	China	MiR124 expression was reduced in NP tissues, which negatively correlated with the expression of AHR. This may be critical to the development of inflammatory response in CRSwNP.
Liu et al. 2019 [83]	To characterize the transcriptome profiles of mRNAs and IncRNAs in patients with CRSwNP.	GEO datasets, blood samples	IncRNA	China	A total of 265 differentially expressed IncRNAs were obtained, including 56 upregulated and 209 downregulated genes.
Luo et al. 2017 [86]	To test whether miR-17-92 cluster is associated with suppressing IL-10 in peripheral DC.	Blood samples	miRNA	China	A negative correlation was found between expression of II-10 and miR- 19a in DC from NP patients. miR19-1 was upregulated while miR-17, -18a, - 19b, -20a and -92a showed no differences between NP and HC.
Ma et al. 2015 [88]	To investigate miRNAs expression profiles of peripheral blood DCs in CRS patients.	Blood samples	miRNA	China	There were 31 miRNAs changed in all CRS patients with respect to HC, and 49 miRNA that changed exclusively in CRSwNP. miR-210-3p, miR-125b-5p, and miR- 150-5p were upregulated in CRS, while miR-708-5p and miR-126-3p were downregulated.
Ma et al. 2018 [87]	To investigate the effects and mechanism of miR-150- 5p to promote the development of CRS via the DC-Th axis.	Blood samples	miRNA	China	miR-150-5p was upregulated in DCs from CRS patients compared with HC, and DCs Promote Naïve T Cells Proliferation. MiR-150-5p further regulated EGR2 and inhibited DCs, leading to an abnormal DC-Th axis.
Qing et al. 2019 [89]	To investigate the mechanisms between the miR-142-3p and TNF-a activation in vitro and in vivo	NP, ITM	miRNA	China	miR-142-3p may participate in the regulation of the body's inflammatory response through the LPS-TLR-TNF-a signaling pathway in CRSwNP.
Seiberling et al. 2012 [95]	To determine the presence of 5-bromo-cytosine, 5- chloro-cytosine and methylated cytosine in CRSwNP.	NP, posterior ethmoid tissue (HC)	DNA modification	USA	The levels of 5-Bromocytosine were significantly higher in polyps (p=0.007). Aberrant methylation patterns in polyp eosinophils may help explain the pathogenesis of CRSwNP.
Tian et al. 2012 [96]	To explore the profiling of tandem alternative polyA (APA) sites in NP.	NP, uncinated process mucosa	Genome-wide polyadenylation site sequencing	China	There was a switching of 3'UTR lengths in NP compared with nasal uncinate process mucosa from the same patient. 105 genes were switched to distal polyA sites in the nasal polyps and 90 genes were switched to proximal poly(A) sites. Besides, 213 genes were upregulated in NP while 414 genes were downregulated.
Xuan et al. 2019 [90]	To evaluate miRNAs profiles and relevant biological pathways in CRSwNP and	Nasal mucosa	miRNA array	China	24 miRNAs showed differential expression. 5 miRNAs (miR-210-5p, miR-3178, miR-585-3p, miR-3146, and

	control subjects.				miR-320e) were significantly upregulated (p < 0.05, fold change >2), and 19 miRNAs, including miR-32-3p, miR-1299, miR-3196, miR-3924, miR- 548e-3p, miR-3184-5p, miR-375, miR- 23a-5p, miR-377-5p, miR-574-5p, miR- 3149, miR-500a-5p, miR-125b-2-3p, miR-1914-5p, miR-532-3p, miR-612, miR-1298-5p, miR-1226-3p, and miR- 668-3p, were significantly downregulated in CRSwNP tissue (p < 0.05, fold change <0.5).
Yan et al. 2020 [91]	To examine human neutrophil elastase-induced MUC5AC overexpression in CRS via miR-146a.	NP, uncinated process mucosa	miRNA	China	EGFR is a target of miR-146a. This miRNA is downregulated in NP reducing the inhibition of EGFR, and therefore MUC5AC expression levels were increased.
Yu et al. 2018 [92]	To evaluate the roles of TGFβ1 and miR-663 in the pathogenesis of NP in children.	Nasal mucosa, peripheral blood eosinophils (PBE)	miRNA	China	The expression of miR-633 was significantly reduced in polyps and PBE from CRS patients, while <i>TGFB1</i> mRNA was significantly increased. miR-633 binds to the 3'UTR of <i>TGFB1</i> and regulated its expression.
Zhang et al. 2012b [94]	To determine the pattern of expression and biological role of miRNAs in CRS.	NP, ethmoidal mucosa, inferior turbinate tissue	miRNA	China	miR-125b was upregulated in CRSwNP when compared to CRSsNP. This may enhance type I IFN expression through suppressing 4E-BP1 protein expression in airway epithelial cells.
Zhang et al. 2012c [97]	To investigate the expression of miRNA machinery components in CRS.	NP, ethmoid sinus mucosa	mRNA expression	China	PACT mRNA expression was found to be upregulated in CRSwNP as compared with controls. The rest of the miRNA machinery components including Drosha, Dicer, TRBP, FXR1 and E1F2C2, showed no differences between patients and controls.
Zheng et al. 2015 [82]	To identify whether DNA methylation pays a role in the pathogenesis of NP.	NP, ITM	DNA methylation	China	198 genes had a differential methylated signal in their promoter region when comparing NP samples with ITM samples. The four most changed genes were <i>COL18A1</i> , <i>EP300</i> , <i>GNAS</i> and <i>SMURF1</i> .
Zhou et al. 2020 [93]	To explore the pathogenesis of CRSwNP from the perspective of genes.	CRSwNP datasets. NP, nasal mucosa (HC)	Functional enrichment analysis, including non- coding RNAs	China	Two clusters of genes, IncRNAs and miRNAs were found to be related to CRSwNP. Main miRNA involves were: miR-130a, miR-27a-3p, miR-193-3p, miR-29a-3p, miR-18b-5p, miR-138-5p, and miR-25- 3p.
