

SUPPLEMENTARY MATERIAL

Applying the REGISCAR diagnostic criteria we would obtain a score of 5 corresponding to Probable DRESS syndrome:

- Suggestive rash (facial edema, purpura, desquamation) and extension (>50%) of the rash: +2.
- Eosinophilia: +2.
- Liver involvement (03/11/2020 ALT 97IU/L and 04/11/2020 75IU/L, normal range up to 35IU/L): +1.
- Alternative cause studies (≥ 3 performed and negative): blood cultures, ANA, hepatitis virus, Mycoplasma, Chlamydia: +1.
- Absence of fever: -1.
