Table 1. Clinical data of the seven patients sensitized to the honey allergen around 50 kDa.

Abbreviations: SPT, skin prick testing (mean wheal in mm); PPT, prick-prick testing; CAP, specific IgE determination by the ImmunoCAP system; np, not performed.

Table 2. Results of the RP-LC-MS/MS analysis of the around 50-kDa allergen detected by the patients and the subsequent searching against the *Apis mellifera* reference proteome downloaded from the UniprotKB repository.
