

SUPPLEMENTARY MATERIAL

Figure S1. Representative results of basophil activation test in watermelon-sensitized patient. A, histogram of CD63 expression after test with PBS in negative control. B, anti-IgE antibody of positive control at 0.5 $\mu\text{g/mL}$. C and D, watermelon extract at 1 ng/ml and 10 $\mu\text{g/mL}$ concentration. E and F, melon extract at 1 ng/ml and 10 $\mu\text{g/mL}$ concentration. G and H, watermelon and melon extracts at 10 $\mu\text{g/mL}$ in healthy control. Activated basophils are expressed in percentage of CD63-positive cells.
