SUPPLEMENTARY MATERIAL

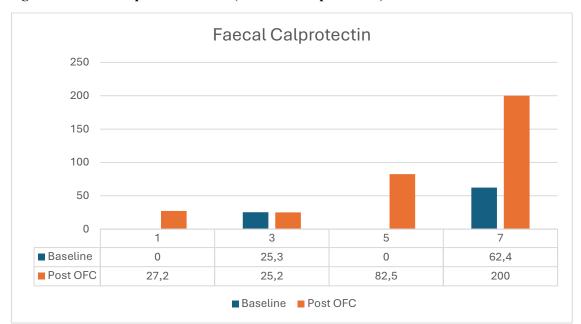

Figure 1. Faecal Calprotectin levels (baseline and post OFC)

Calprotectin concentrations were expressed as micrograms per gram of stool (ug/g).

The level above which values are considered high is marked with a dashed line.

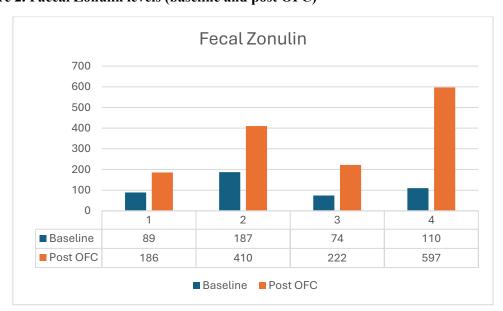

Figure 2. Faecal Zonulin levels (baseline and post OFC)

Results were expressed in nanograms per milliliter (ng/mL).

The level above which values are considered high is marked with a dashed line.
